

Monitor the health of your business in *real-time* with **Clover Query**

Empower users to create IBM i web reports that show key performance metrics

Clover Query is a Business Intelligence tool that makes it easy for your non-technical users and programmers to rapidly create real-time IBM i web based reports & queries.

Your organization will make better decisions by using Clover reports to track sales, profit margin, inventory, costs, employee entitlements and any other key performance indicators over multiple databases.

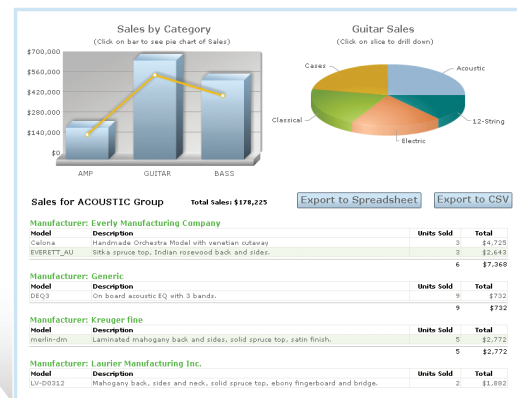

- ▶ Create reports in minutes with SQL templates
- ▶ Represent data visually with charts and dashboards
- ▶ Get instant access to web reports using a browser
- ▶ Cut costs by reducing paper based report printing
- ▶ Save money with unlimited user licensing
- ▶ Provide secure and easy access to your reports with a free* license of Nexus Portal (*only maintenance is billed)

Our Clover dashboard reflects new orders as they are entered and management knows exactly where things stand at any given moment."

Michael Ellis, Director of IT – Key City Furniture

Connect to more databases in version 3

In new Clover v3 you can build real-time reports over **MySQL** and **MS SQL Server** multi-platform databases as well as **DB2**.

Create interactive dashboards with charts, export to Excel, drill downs, level breaks, calculations and more.

Customize reports to meet your needs

- Embed business logic
- Call RPG programs
- Filters & parameters
- Dynamic library lists
- Email distribution
- Change management
- Query/400 import
- Ad hoc reports
